LABORATORYMANUAL

Department of Computer Science Engineering(CB)

Web Technologies

(SEIT3270)|B.Tech.

Name of Student: **HASTI POKAR**

Enrollment No.: **24SE02CB037**

Academic Year: 2026-2027

P P Savani School of Engineering

CERTIFICATE

This is to certify that

Mr./Ms. **HASTI POKAR**

Of **B.TECH CYBER SECURITY**___Engineering

having Enrollment No. **24SE02CB037**_____has completed

his/her Term work in the subject of

Web Technologies

(SEIT3270)

Marks Obtained:_____out of _____

Sign of Faculty
Date:_____

Sign of Head of Department
Date:_____

CONTENTS

Sr. No.	NAMEOFTHEPRACTICAL	PAGENO	DATE	MARK	SIGN
1.	Design web a page for the department timetable containing a suitable header, footer, description of the course codes and titles, facultyname andinitials,etc. Use <hr>, listtags andaddUniversitylogoasabackground.Using tabletagandadditionalfeatureslikespanning rows, columns and table borders. (Refer your class timetable)	1-13	22-06-2026		
2.	**a)** Create a form to collect Student feedback. (Usetextbox,textarea,checkbox,radiobutton, select box etc.).**b)** Create a web page using frame. Divide the page into two parts with Navigation links on the left hand side of page (width=20%) and content page on right hand sideofpage(width=80%).Onclickingthe navigationlinks corresponding contentmustbe shown on the right-hand side.	13-16	25-06-2026		
3.	Createawebpageusingframe.Dividethepage into two parts with Navigation links on the left hand side of page (width=20%) and content page on right hand side of page (width=80%). Onclickingthenavigationlinkscorresponding contentmustbeshownontheright-handside.	17-20	06-07-2026		
4.	WriteHTMLcodetodevelopawebpagehaving two frames that divide the webpage into two equal rows and then divide the row into equal columns.Filleachframewithadifferent backgroundcolour.	21-23	06-07-2026		
5.	Create your resume using HTML tags. Also experiment with colors, text (bold, italic and differentheadings),image,link,sizeandalso otherrelatedtags.	23-31	13-07-2026		
6.	Design a web page using CSS with suitable design for the following:i. Demonstrate different font styles.ii. Control the repetition of image with background-repeat property.iii. Define style for links as: a link, a: active, a: hover,a:visited.iv.DemonstrateElement visibilityproperty.	31-33	15-07-2026		
7.	Designawebpageofyourinstitutewithan attractivebackgroundcolor,textcolor,an image,fontetc.(UseinternalCSS).UseExternal CSS to format the class timetable.	34-37	21-07-2026		
8.	Develop simple calculator for Addition, Subtraction, Multiplication and Division operationusingJavaScript.**a)**CreateHTML PagethatcontainsformwithfieldsName,	38-45	24-08-2026		

	Email, Mobile No, Gender, Favorite Color and a button. Write a JavaScript code to validate all the fields when the button is clicked, later combineanddisplaytheinformationinthe textbox.				
9.	Write an XHTML document which displays a form containing textelements toinputregister number, sub-code, marks in three tests and a button element. Also write JavaScript to computetheaverageoftwobesttestsonclick of button and print average marks using alert. Validate all the fields using JavaScript.	45-48	26-08-2026		
10.	**a)** Write a PHPscript to display today's date in dd-mm-yyyy format.**b)** Write a PHP script to check whether the number is prime or not whenuserinputavalidnumberfromclient side.	49-51	03-09-2026		
11.	CreateHTMLpagethatcontaintextbox,submit / reset button. Write PHP script to display this information and also store into a text file.	52-54	26-09-2026		
12.	Write a PHP script for login authentication. Design an HTML form which takes Username andPasswordfromuserandvalidateagainst storedUsernameandPasswordinafile.	54-58	26-09-2026

    <br>

    <input type="submit" value="Submit">
    <input type="reset" value="Reset">

</form>
</body>
</html>
```

Practical 3

Aim:

1. Create a web page using frame. Divide the page into two parts with Navigation links on left hand side of page (width = 20%) and content page on right hand side of page (width = 80%). On clicking the navigation Links corresponding content must be shown on the right-hand side.

2. Create a web page using the <frameset> tag with the following layout:
   - Divide the page into two rows:
     - Top Row: 20% (Header)
     - Bottom Row: 80%
   - Divide the bottom row into three columns:
     - Left: 20% (Menu)
     - Center: 60% (Content)
     - Right: 20% (News/Advertisement)
   - Display separate HTML pages in each frame.

HOMES.HTML

```
<html>
<head>
    <title>Home</title>
</head>
<body bgcolor="white">
<center>
    <h1>Home Page</h1>
    <p>Welcome to the Home Page.</p>
</center>
</body>
</html>
```

ABOUTS.HTML

```
<html>
<head>
    <title>About</title>
```

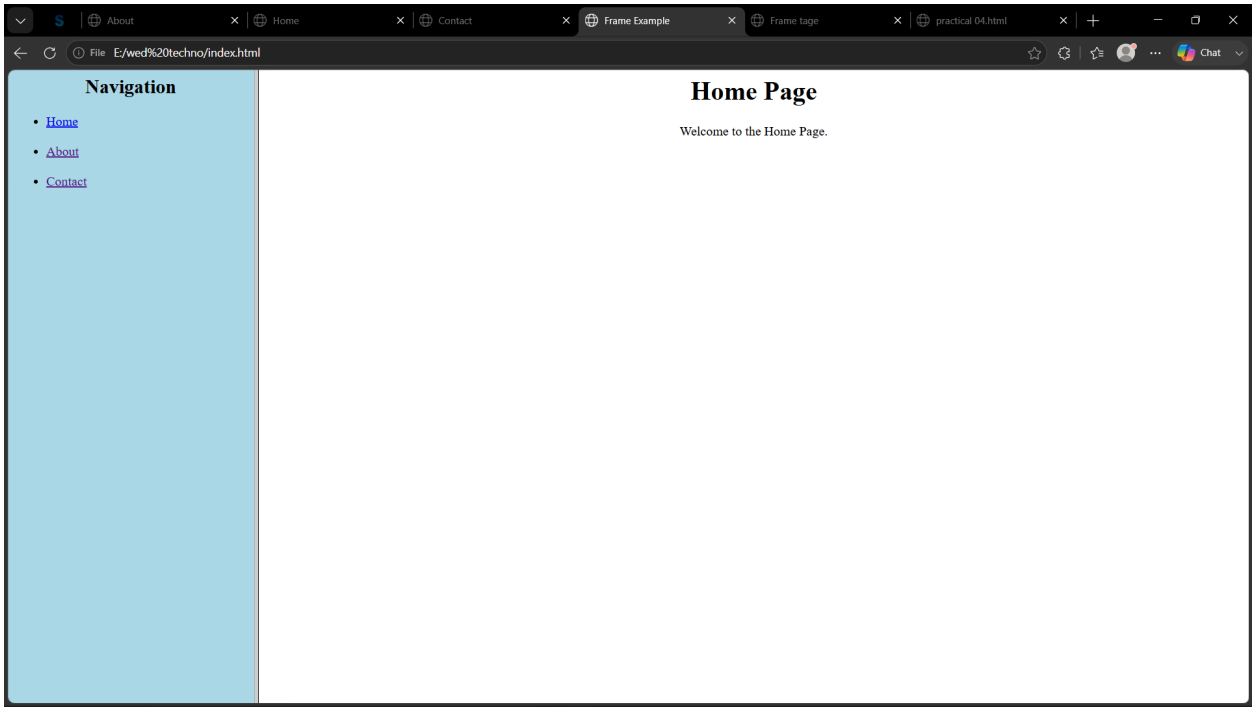

```
</head>
<body bgcolor="lightblue">
<center>
    <h1>About Page</h1>
    <p>This is the About Page.</p>
</center>
</body>
</html>
```

CONTACT.HTML

```
<html>
<head>
    <title>Contact</title>
</head>
<body bgcolor="white">
<center>
    <h1>Contact Page</h1>
    <p>This is the Contact Page.</p>
</center>
</body>
</html>
```

INDEX.HTML

```
<html>
<head>
    <title>Frame Example</title>
</head>
<frameset cols="20%,80%">
    <frame src="practical 03.html" name="prac">
    <frame src="homes.html" name="content">
</frameset>
</html>
```

PRACTICAL03.HTML

```
<html>
<head>
    <title>Navigation Menu</title>
</head>
<body bgcolor="lightblue">
<center><h2>Navigation</h2></center>
<ul>
    <li><a href="homes.html" target="content">Home</a></li><br>
    <li><a href="abouts.html" target="content">About</a></li><br>
    <li><a href="contact.html" target="content">Contact</a></li>
</ul>
</body>
</html>
```

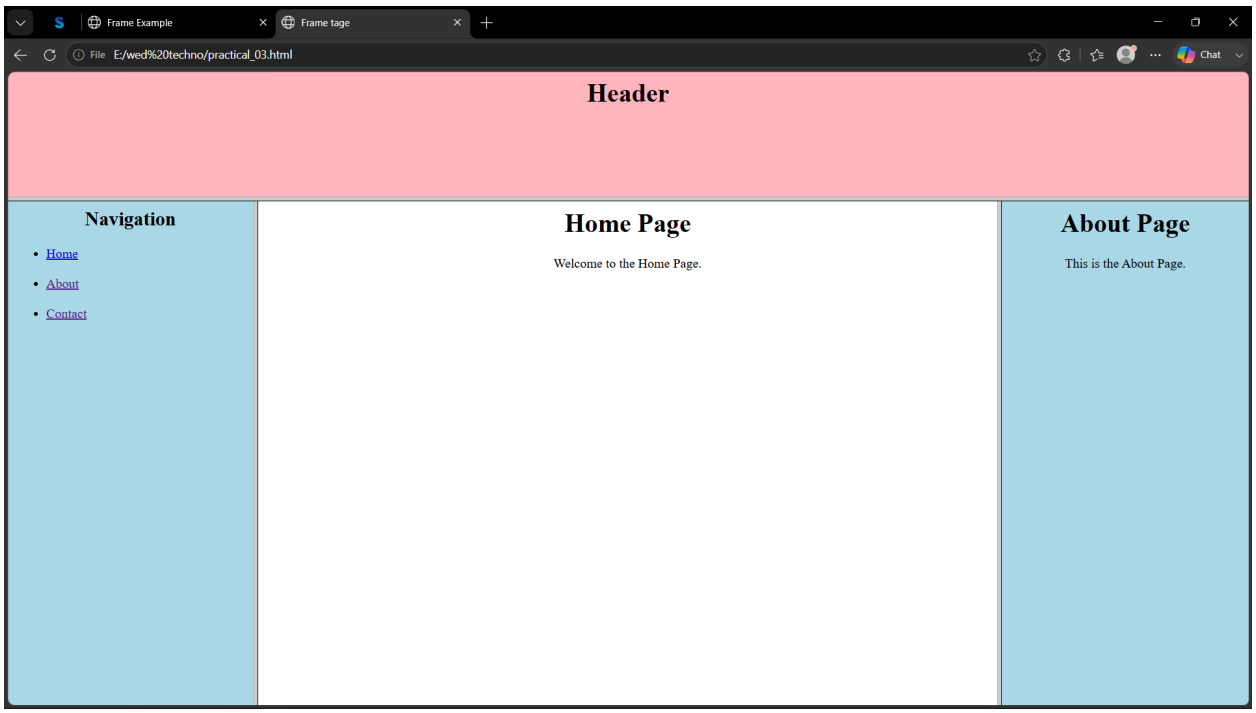

PRACTICAL_03.HTML

```
<html>
    <head>
        <title>Frame tage</title>
    </head>
    <frameset rows="20%,*" norsize>
```

```
        <frame src="header.html">
            <frameset cols="20%,60%,20%">
                <frame src="practical 03.html">
                    <frame src="homes.html">
                        <frame src="abouts.html">
            </frameset>
    </frameset>
```

HEADER.HTML

```
<html>
    <head>
        <title>Home</title>
    </head>
    <body bgcolor="lightpink">
        <center>
            <h1>Header</h1>
        </center>
</html>
```

Practical 4

Aim:

1.Write HTML code to develop a webpage having two frames that divide the webpage into two equal rows and then divide the row into equal columns fill each frame with a different background colour.

LIGHTPINK.HTML

```
<html>
    <head>
        <title>Light pink</title>
    </head>
    <body bgcolor="lightpink">
    </body>
</html>
```

LIGHTGREEN.HTML

```
<html>
    <head>
        <title>Light green</title>
    </head>
    <body bgcolor="lightgreen">
    </body>
</html>
```

LIGHTBLUE.HTML

```
<html>
```

```
    <head>
        <title>Light Blue</title>
    </head>
    <body bgcolor="lightblue">
    </body>
</html>
```

LIGHTYELLOW.HTML

```
<html>
    <head>
        <title>Light yellow</title>
    </head>
    <body bgcolor="lightyellow">
    </body>
</html>
```

PRACTICAL04.HTML

```
<html>
    <frameset rows="50%,50%" norsize>
        <frameset cols="50%,*"
           <frame src="lightblue.html">
            <frame src="lightpink.html">
            </frameset>
            <frameset cols="50%,*">
            <frame src="lightyellow.html">
            <frame src="lightgreen.html">
    </frameset>
```

```
</html>
```

Practical 5

Aim:

Create your resume using HTML tags also experiment with colors, text (bold, italic and different headings), image, link, size and also other related tags.

Code

```
<html>

<head>

    <title>Professional Resume</title>

    <style>
```

```
        /* --- CSS BACKGROUND & BODY --- */

        body {

            background-color: #f4f6f9; /* Light gray background */

                 background-image: linear-gradient(rgba(255, 255, 255,
0.92), rgba(255, 255, 255, 0.92)), url('images.jpeg');

            background-repeat: no-repeat;

            background-position: center;

            background-attachment: fixed;

            font-family: Arial, sans-serif;

            color: #333333;

            margin: 0;

            padding: 40px 20px;

        }

        /* --- RESUME CONTAINER WITH SHADOW --- */

        .resume-container {

            max-width: 850px;

            margin: 0 auto;

            background-color: #ffffff;

            padding: 40px;

            border: 1px solid #e1e4e8;

            border-radius: 8px;

            box-shadow: 0 4px 12px rgba(0, 0, 0, 0.1);

        }
```

```
        .resume-header {
            text-align: center;
            border-bottom: 3px solid #123456;
            padding-bottom: 20px;
            margin-bottom: 25px;
        }

        .profile-img {
            width: 130px;
            height: 130px;
            border-radius: 50%; /* Makes image perfectly circular */
            border: 3px solid #123456;
            object-fit: cover;
        }

        h1 {
            color: #123456;
            margin: 10px 0 5px 0;
            font-size: 32px;
            text-transform: uppercase;
        }

        h2 {

</body>
```

```
</html>
```

Practical 6

Aim:

Design a web page using CSS with suitable design for the following:

I. Demonstrate different font styles
II. Control the repetition of image with background-repeat property
III. Define style for links as a: link, a: active, a: hover, a: visited
IV. Demonstrate Element visibility property

Code

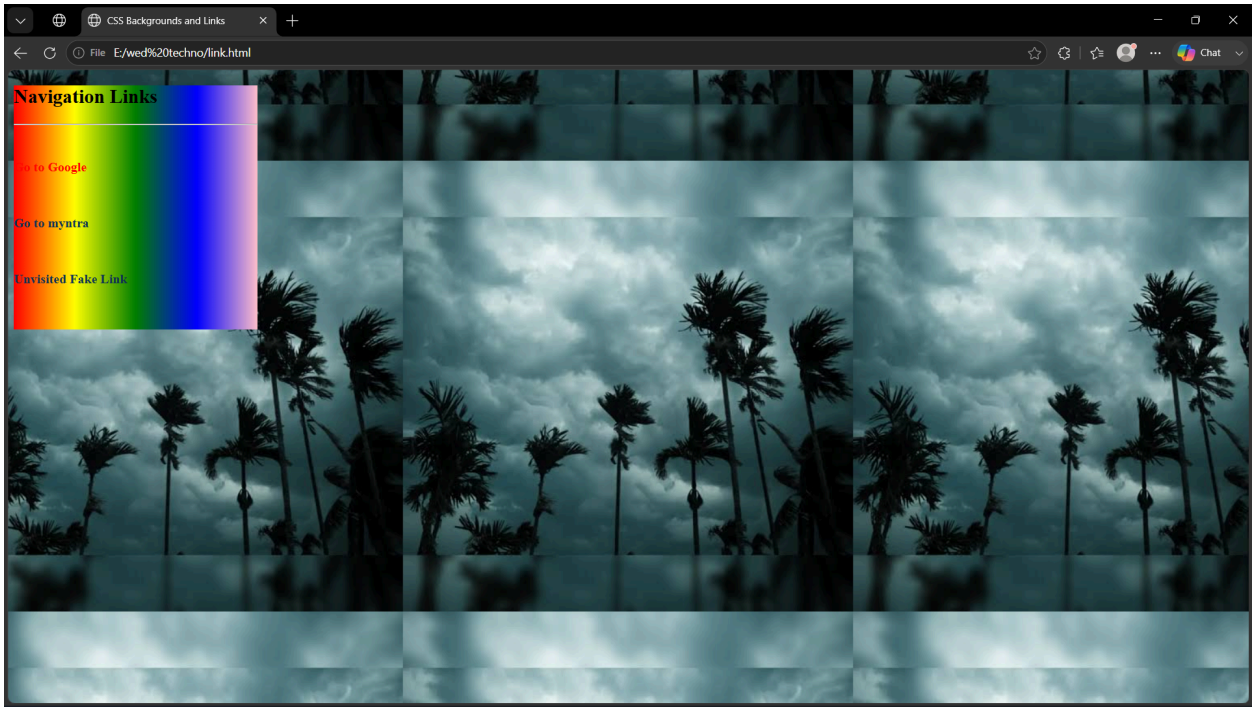

```
<!DOCTYPE html>
```

```
<html>
<head>
    <title>CSS Backgrounds and Links</title>
    <style>
        body {
            background-color: lightpink;
            background-image: url('weather.jpeg');
            background-repeat: repeat;
            background-position: center;
            background-attachment: fixed;
        }
        img{
            opacity: 0.5;
        }
        a:link {
            color: #123456;
            text-decoration: none;
            font-weight: bold;
        }
        a:visited {
            color: #FF0500;
        }
        a:hover {
            color: #1234FF;
            text-decoration: underline;
        }
        a:active {
            color: #FF10FF;
        }

        div{
            width: 300px;
            height: 300px;
            background-image: linear-gradient(to right, red,
yellow,green,blue,pink);
            background-repeat: no-repeat;

        }
    </style>
```

```
</head>
<body>
    <div>
        <h2>Navigation Links</h2>
        <hr>
        <br>
        <p><a href="https://www.google.com" target="_blank">Go to
Google</a></p>
        <br>
        <p><a href="https://www.myntra.org" target="_blank">Go to
myntra</a></p>
        <br>
        <p><a href="https://thisisawebsite.invalid"
target="_blank">Unvisited Fake Link</a></p>
    </div>
</body>
</html>
```

Practical 7

Aim:

Design a web page of your institute with an attractive background color, text color,an Image, font etc. (use internal CSS). Use External CSS to format the classtimetable.

Code

```
<!DOCTYPE html>
<html>
<head>
    <title>P. P. Savani University</title>
    <style>
        body{
            background: linear-gradient(to right,#ffe5ec,lightblue);
            font-family: Arial, sans-serif;
            margin:0;
        }
        header{
            background:lightpink;
            color:white;
            text-align:center;
            padding:20px;
        }
        h1{
            font-size:38px;
        }
        h2{
            color:lightpink;
        }
        p{
            font-size:18px;
            color:#333;
            line-height:1.6;
        }
        img{
            display:block;
            margin:auto;
```

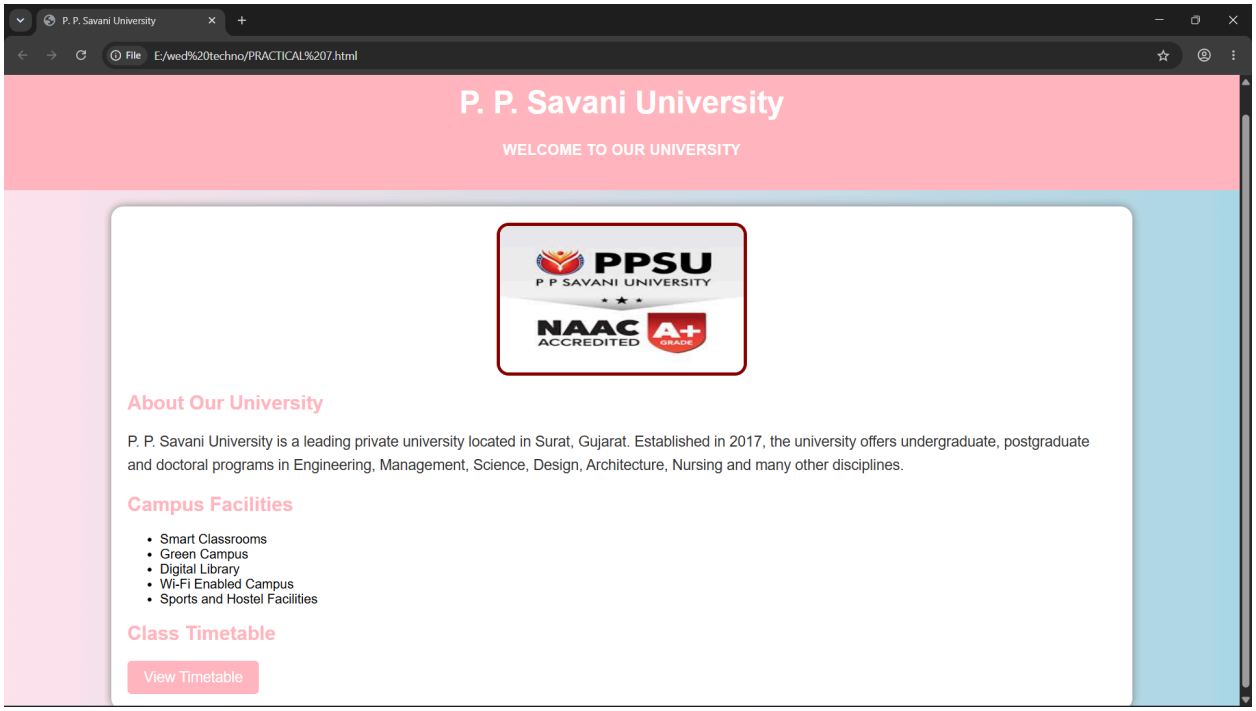

```
            border-radius:15px;
            border:4px solid #8b0000;
        }
        .content{
            width:80%;
            margin:auto;
            background:white;
            padding:20px;
            margin-top:20px;
            border-radius:15px;
            box-shadow:0px 0px 10px gray;
        }
        .button{
            display:inline-block;
            background:lightpink;
            color:white;
            padding:10px 20px;
            text-decoration:none;
            border-radius:5px;
            font-size:18px;
       }
        .button:hover{
            background:lightpink;
       }
    </style>
</head>
<body>

Practical 8

Aim:

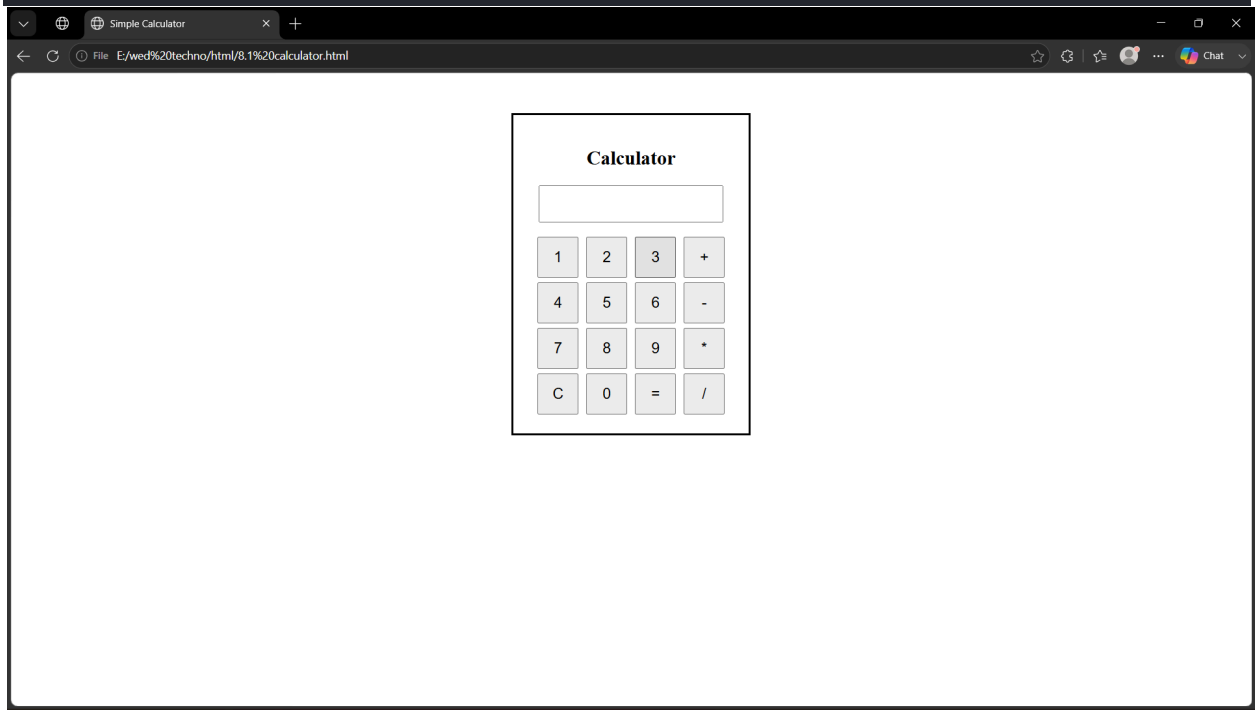

1. Develop a simple calculator for Addition, Subtraction, Multiplication and Division operation using JavaScript.

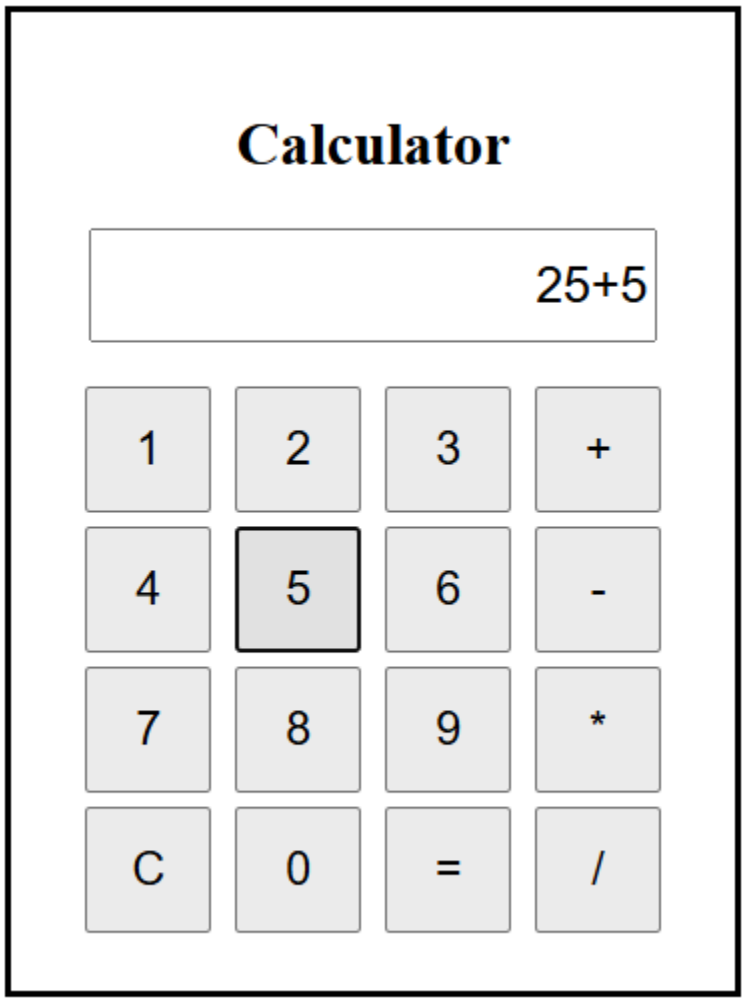

Code:

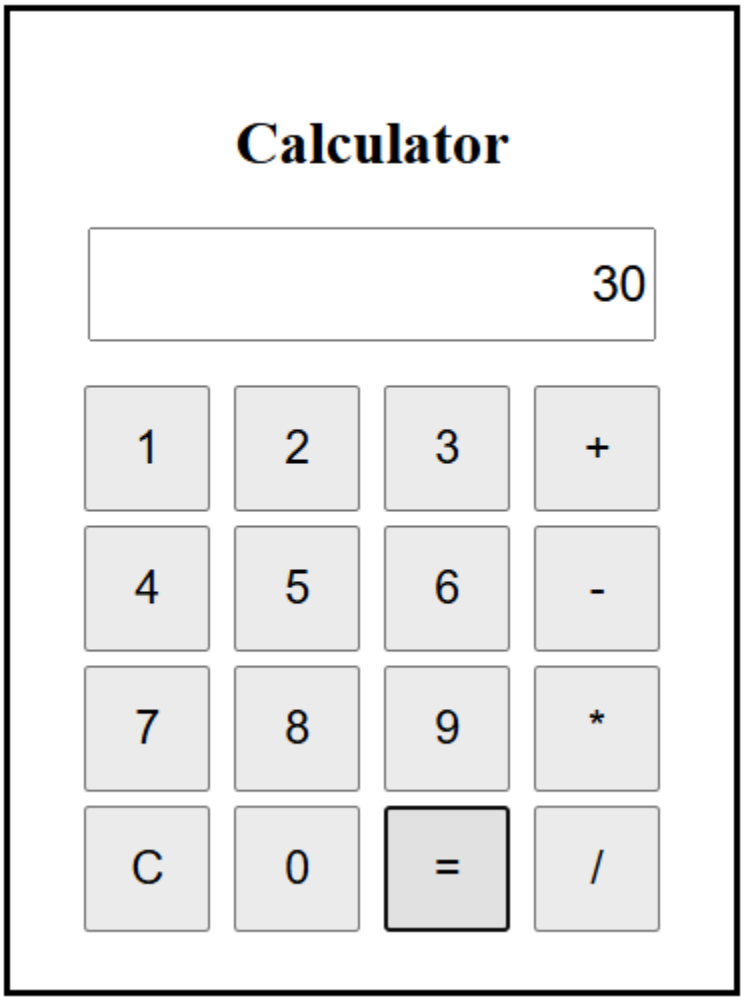

```
<html>
<head>
    <title>Simple Calculator</title>
    <style>
        .calculator {
            width: 250px;
            margin: 50px auto;
            padding: 20px;
            border: 3px solid black;
            text-align: center;
        }
        #display {
            width: 220px;
            height: 40px;
            font-size: 20px;
            margin-bottom: 15px;
            text-align: right;
        }
        button {
            width: 50px;
            height: 50px;
            margin: 3px;
            font-size: 18px;
        }
    </style>
</head>
<body>
<div class="calculator">
    <h2>Calculator</h2>
```

```
    <input type="text" id="display" readonly>
    <br>
    <button onclick="addValue('1')">1</button>
    <button onclick="addValue('2')">2</button>
    <button onclick="addValue('3')">3</button>
    <button onclick="addValue('+')">+</button>
    <br>
    <button onclick="addValue('4')">4</button>
    <button onclick="addValue('5')">5</button>
    <button onclick="addValue('6')">6</button>
    <button onclick="addValue('-')">-</button>
    <br>
    <button onclick="addValue('7')">7</button>
    <button onclick="addValue('8')">8</button>
    <button onclick="addValue('9')">9</button>
    <button onclick="addValue('*')">*</button>
    <br>
    <button onclick="clearDisplay()">C</button>
    <button onclick="addValue('0')">0</button>
    <button onclick="calculate()">=</button>
    <button onclick="addValue('/')">/</button>
</div>
<script>
    function addValue(value) {
        document.getElementById("display").value += value;
    }
    function clearDisplay() {
        document.getElementById("display").value = "";
    }
    function calculate() {
        let expression = document.getElementById("display").value;
        try {
            document.getElementById("display").value = eval(expression);
        }
        catch {
            document.getElementById("display").value = "Error";
        }
    }
</script>
```

```
</body>
</html>

2. Create HTML Page that contains form with fields Name, Email, Mobile No,Gender, FavoriteColor and a button. Write a JavaScript code to validate all the fields when the button is clicked, later combine and display the information intext box.

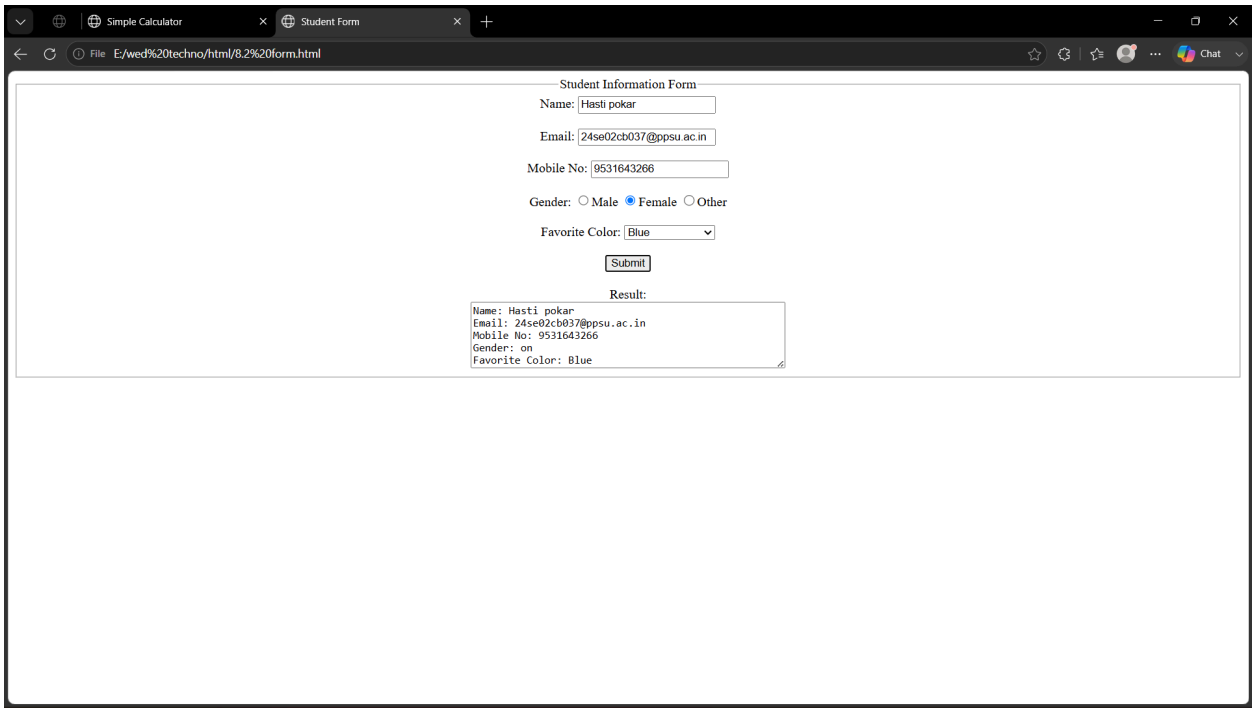

Code:

```
<html>
<head>
    <title>Student Form</title>
</head>
<body align="center">
    <form onsubmit="validateForm(event)">
```

```
    <fieldset>
        <legend>Student Information Form</legend>
        <label>Name:</label>
        <input type="text" id="name">
        <br><br>
        <label>Email:</label>
        <input type="email" id="email">
        <br><br>
        <label>Mobile No:</label>
        <input type="number" id="mobile">
        <br><br>
        <label>Gender:</label>
        <input type="radio" name="gender"/>Male
        <input type="radio" name="gender"/>Female
        <input type="radio" name="gender"/>Other
        <br><br>
        <label>Favorite Color:</label>
        <select id="color">
            <option value="">--Select Color--</option>
            <option value="Red">Red</option>
            <option value="Blue">Blue</option>
            <option value="Green">Green</option>
            <option value="Yellow">Yellow</option>
        </select>
        <br><br>
        <button type="submit">Submit</button>
        <br><br>
        <label>Result:</label>
        <br>
        <textarea id="result" rows="5" cols="50" readonly></textarea>
    </fieldset>
    </form>
    <script>
        function validateForm(event) {
            event.preventDefault();
            let name = document.getElementById("name").value;
            let email = document.getElementById("email").value;
            let mobile = document.getElementById("mobile").value;
            let color = document.getElementById("color").value;
```

```
            let gender =
document.querySelector('input[name="gender"]:checked');

            if (name == "") {
                alert("Please enter your name");
                return;
            }
            if (email == "") {
                alert("Please enter your email");
                return;
            }
            if (mobile == "") {
                alert("Please enter your mobile number");
                return;
            }
            if (mobile.length != 10 || isNaN(mobile)) {
                alert("Mobile number must contain 10 digits");
                return;
            }
            if (gender == null) {
                alert("Please select your gender");
                return;
            }
            if (color == "") {
                alert("Please select your favorite color");
                return;
            }
            let information =
                "Name: " + name + "\n" +
                "Email: " + email + "\n" +
                "Mobile No: " + mobile + "\n" +
                "Gender: " + gender.value + "\n" +
                "Favorite Color: " + color;
            document.getElementById("result").value = information;
        }
    </script>
</body>
</html>
```

Practical 9

Aim:

Write an XHTML document which displays a form containing text elements to input register number, sub-code, marks in three tests and a button element. Also writeJava script compute the average of two best tests on click of button and print average marks using alert. Validate all the fields using JavaScript.

Code:

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
    "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">

<html xmlns="http://www.w3.org/1999/xhtml">
<head>
    <title>Practical 9 - Test Average</title>

    <script type="text/javascript">
        function calculateAverage() {

            var regno = document.getElementById("regno").value;
            var subcode = document.getElementById("subcode").value;
```

```
        var test1 = document.getElementById("test1").value;
        var test2 = document.getElementById("test2").value;
        var test3 = document.getElementById("test3").value;

        if (regno == "") {

Practical 10

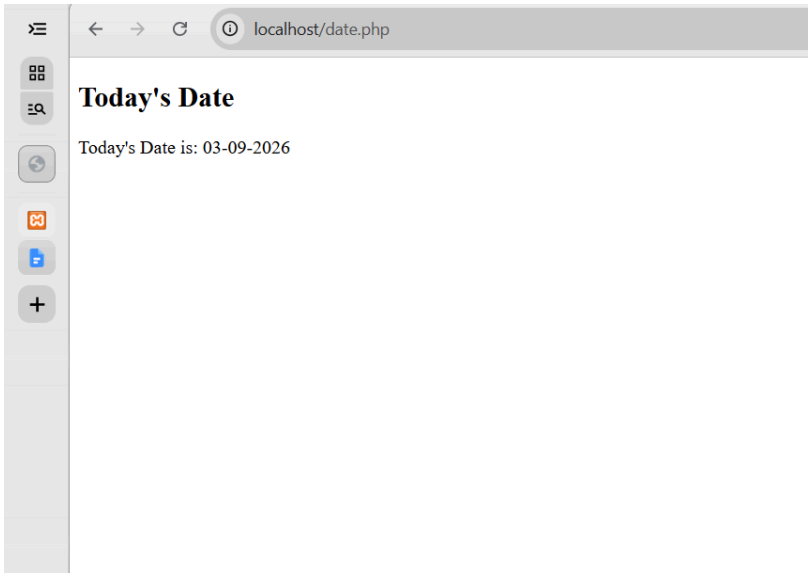

Aim:

a) Write a PHP script to display today's date in dd-mm-yyyy format.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>Today's Date</title>
</head>
<body>
    <h2>Today's Date</h2>
    <?php
        echo "Today's Date is: " . date("d-m-Y");
    ?>

</body>
</html>
```

b) Write a PHP script to check whether the number is prime or not when the user inputs a valid number from the client side.

Code:

```
<!DOCTYPE html>
<html>
<head>
    <title>Prime Number</title>
</head>
<body>
    <h2>Check Prime Number</h2>
    <form method="post">
        Enter a Number:
        <input type="number" name="num" required>
        <input type="submit" value="Check">
    </form>
    <?php
    if ($_SERVER["REQUEST_METHOD"] == "POST") {

        $num = $_POST["num"];
        $count = 0;

        if ($num <= 1) {
            echo "<p>$num is Not a Prime Number</p>";
        }
        else {

            for ($i = 1; $i <= $num; $i++) {

                if ($num % $i == 0) {
                    $count++;
                }
            }

            if ($count == 2) {
                echo "<p>$num is a Prime Number</p>";
            }
            else {
                echo "<p>$num is Not a Prime Number</p>";
            }
        }
    }
```

```
    ?>

</body>
</html>
```

localhost/prime.php
Check Prime Number
Enter a Number:
Check
2 is a Prime Number

localhost/prime.php
Check Prime Number
Enter a Number:
Check
9 is Not a Prime Number

Practical 11

Aim:

Create an HTML page that contains a textbox, submit / reset button. Write a PHP script to display this information and also store it into a text file.

Code:

indexs.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Information Form</title>
</head>
<body>

    <h2>Enter Your Information</h2>

    <form action="info.php" method="post">

        <label>Enter Information:</label>
        <input type="text" name="info" required>

        <br><br>

        <input type="submit" value="Submit">
        <input type="reset" value="Reset">

    </form>

</body>
</html>
```

Info.php

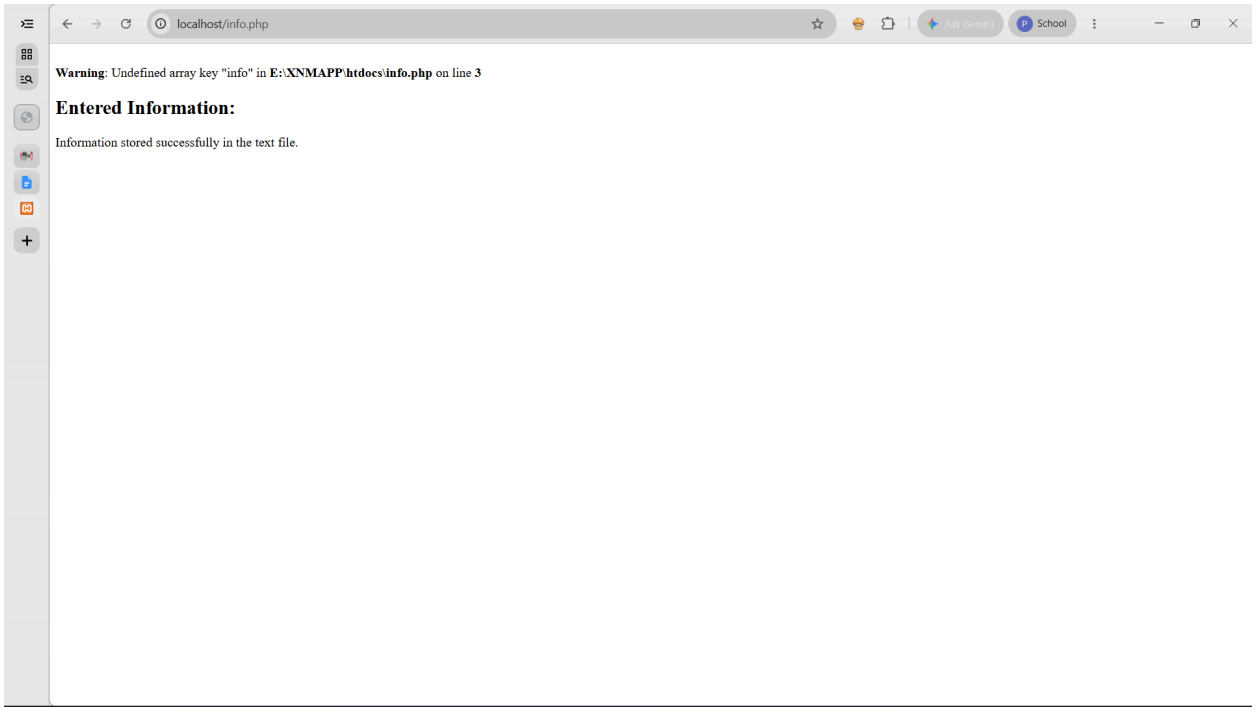

```php
<?php

$info = $_POST["info"];

echo "<h2>Entered Information:</h2>";
echo $info;

$file = fopen("information.txt", "a");
fwrite($file, $info . "\n");
fclose($file);

echo "<p>Information stored successfully in the text file.</p>";
?>
```

Practical 12

Aim:

Write a PHP script for login authentication. Design an HTML form which takes Username and Password from user and validate against stored Username and Password in a file.

Code :

Login.html

```
<!DOCTYPE html>
<html>
<head>
    <title>Login Authentication</title>
</head>
<body>

    <h2>Login Form</h2>

    <form action="login.php" method="post">
```

```
        <label>Username:</label>
        <input type="text" name="username" required>

        <br><br>

        <label>Password:</label>
        <input type="password" name="password" required>

        <br><br>

        <input type="submit" value="Login">
        <input type="reset" value="Reset">

    </form>

</body>
</html>
```

Login.txt

admin,12345
hasti,1234
student,password

Login.php

```php
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {

    $username = $_POST["username"];
    $password = $_POST["password"];

    $file = fopen("login.txt", "r");

    $valid = false;

    while (($line = fgets($file)) !== false) {

        $data = explode(",", trim($line));
```

```
        $stored_username = $data[0];
        $stored_password = $data[1];

        if ($username == $stored_username && $password ==
$stored_password) {
            $valid = true;
            break;
        }
    }
    fclose($file);

    if ($valid) {
        echo "<h2>Login Successful</h2>";
        echo "Welcome, " . $username;
    } else {
        echo "<h2>Invalid Username or Password</h2>";
    }

} else {
    echo "Please login using the login form.";
}
?>
```

localhost/login.php
Please login using the login form.
